

Project Needs

Why is the Project Needed?

Normal maintenance and repairs are needed to extend the expected service life of the bridge another 20-30 years.

Why does the bridge need to be closed?

Bridge closure and detour is needed for the floor beam repairs and to strengthen deck trusses. The Iowa side pavement replacement would also be accomplished during this closure.

All other maintenance and repairs would be done with the bridge crossing available. Lane closures would be controlled by flagging or a temporary signal.

Major work

Painting

Floor Beam Repair and Deck Truss Strengthening

Abutment Repairs

Rail Repair

Navigation and Overhead Lighting Repairs
